1. Intro

The project "Modern MISP Frontend" is implemented as a client-side rendered [SvelteKit](#) application.

SvelteKit applications are constructed out of [Components](#). They are `.svelte` files found in the `src` directory of this project. See [here](#) for general documentation about Svelte Components.

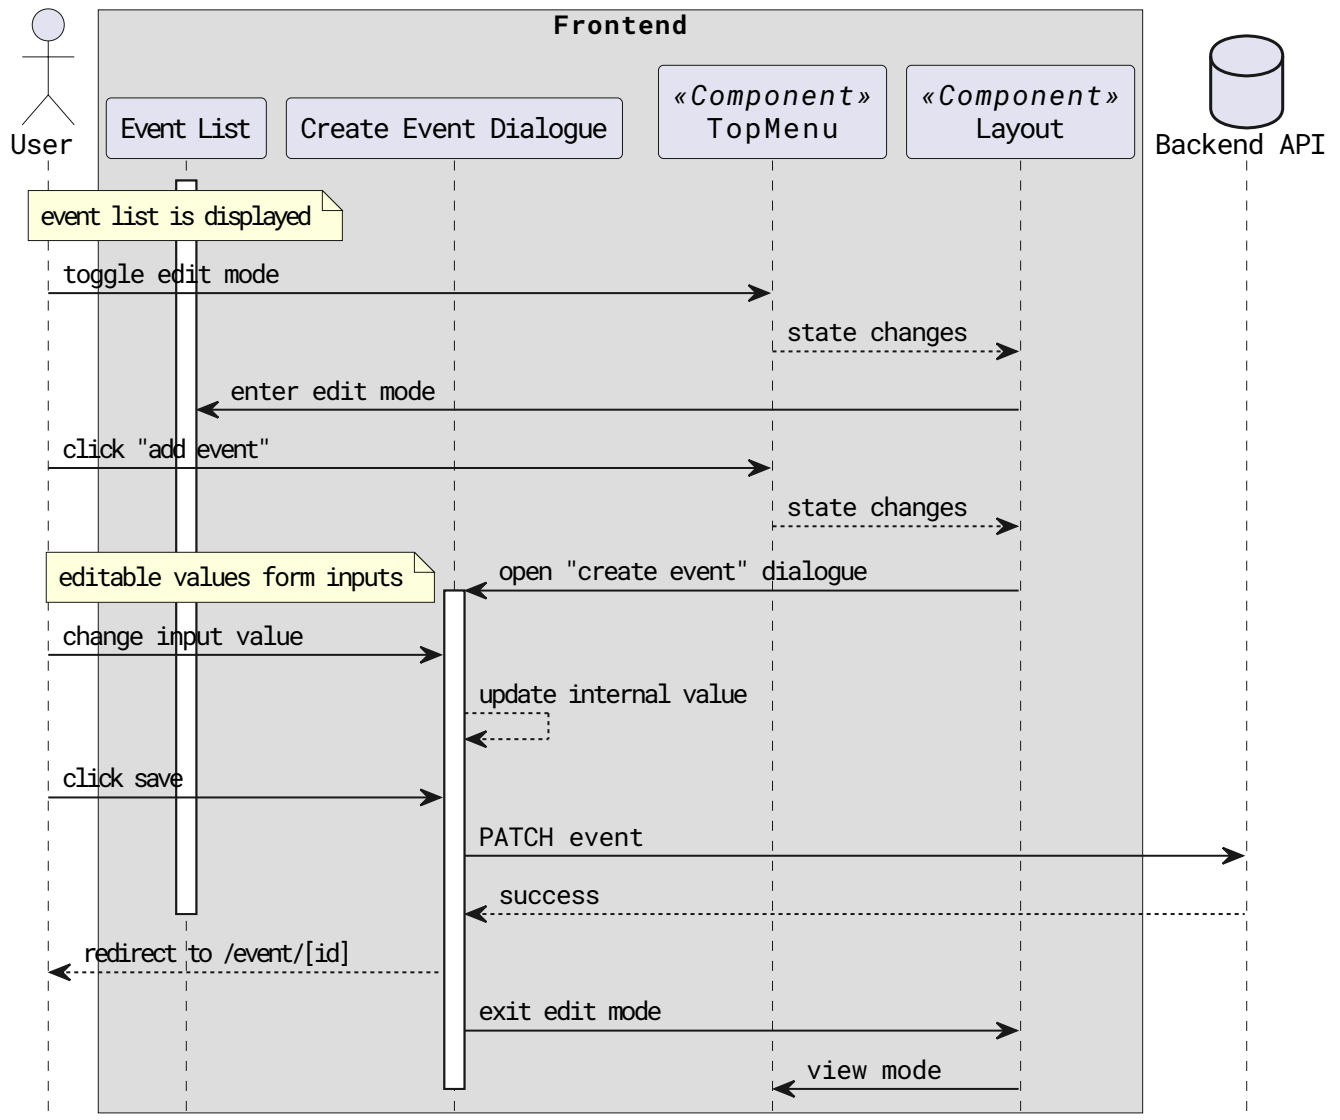

All routes of the application are represented by specific Components called [Pages](#). They are the files called `+page.svelte` in the `src/routes` directory of this project. See [here](#) for general documentation about SvelteKit Pages.

Pages "inherit" from specific Components called [Layouts](#) placed higher up in the route tree by automatically being placed into the Layout's default slot. They are the files called `+layout.svelte` in the `src/routes` directory of this project. See [here](#) for general documentation about SvelteKit Layouts.

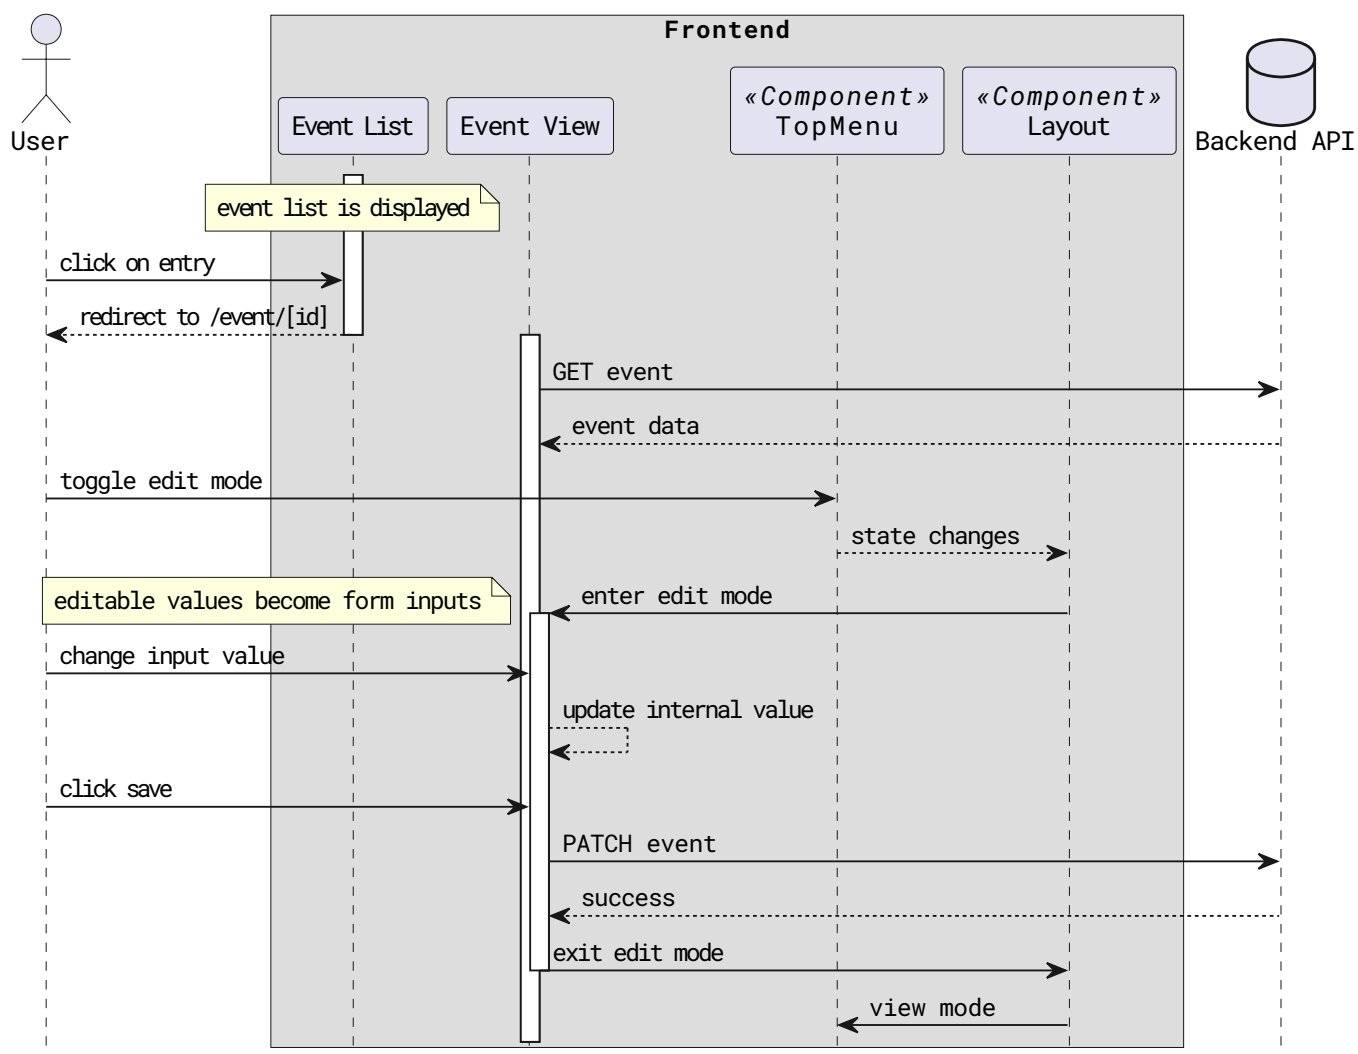

Note that the inter-component dependencies and the specifics of exposed props, slots and events may not fully represent the final state of the application, as agreed upon with our supervisors.

2. Sequence Diagrams

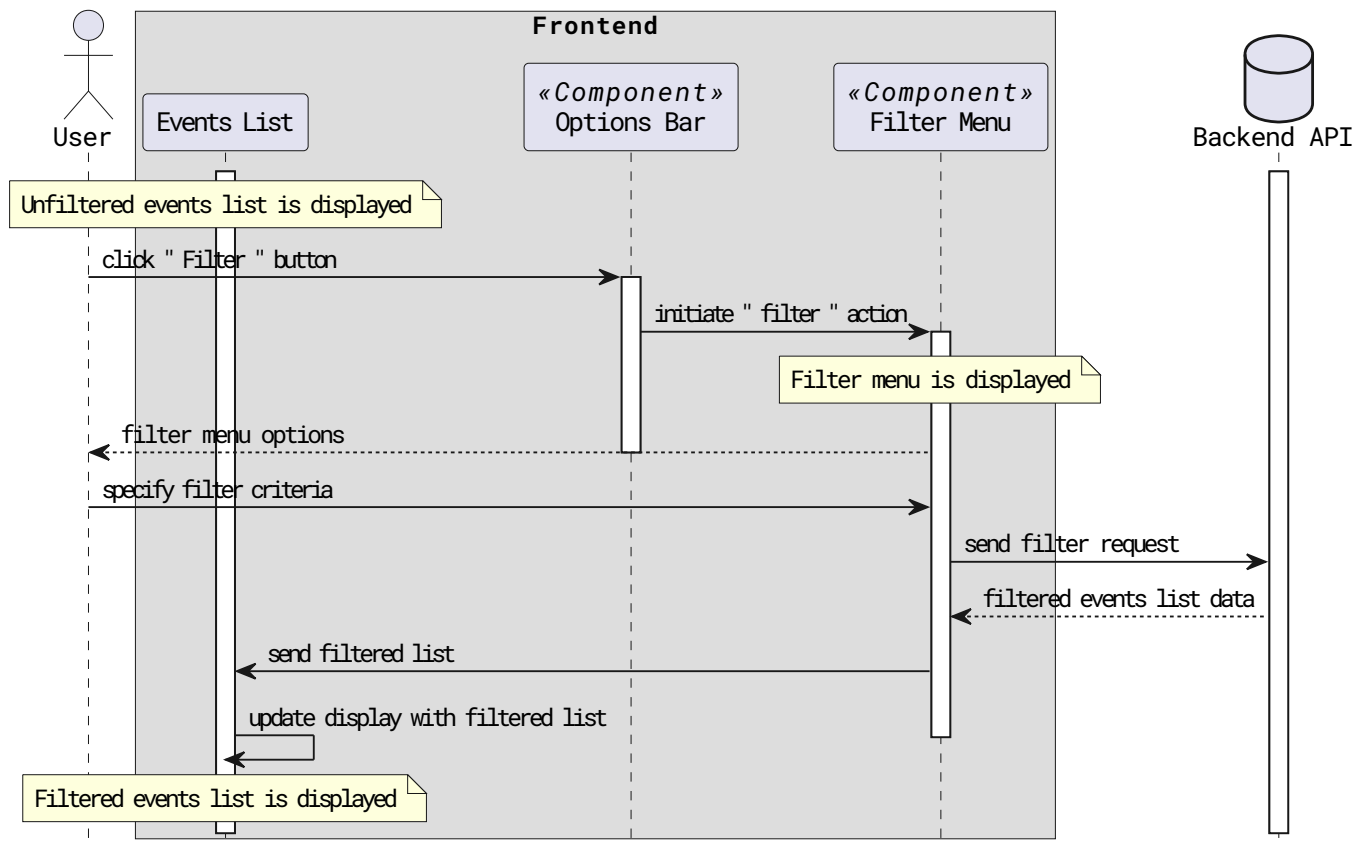

2.1 Add Event

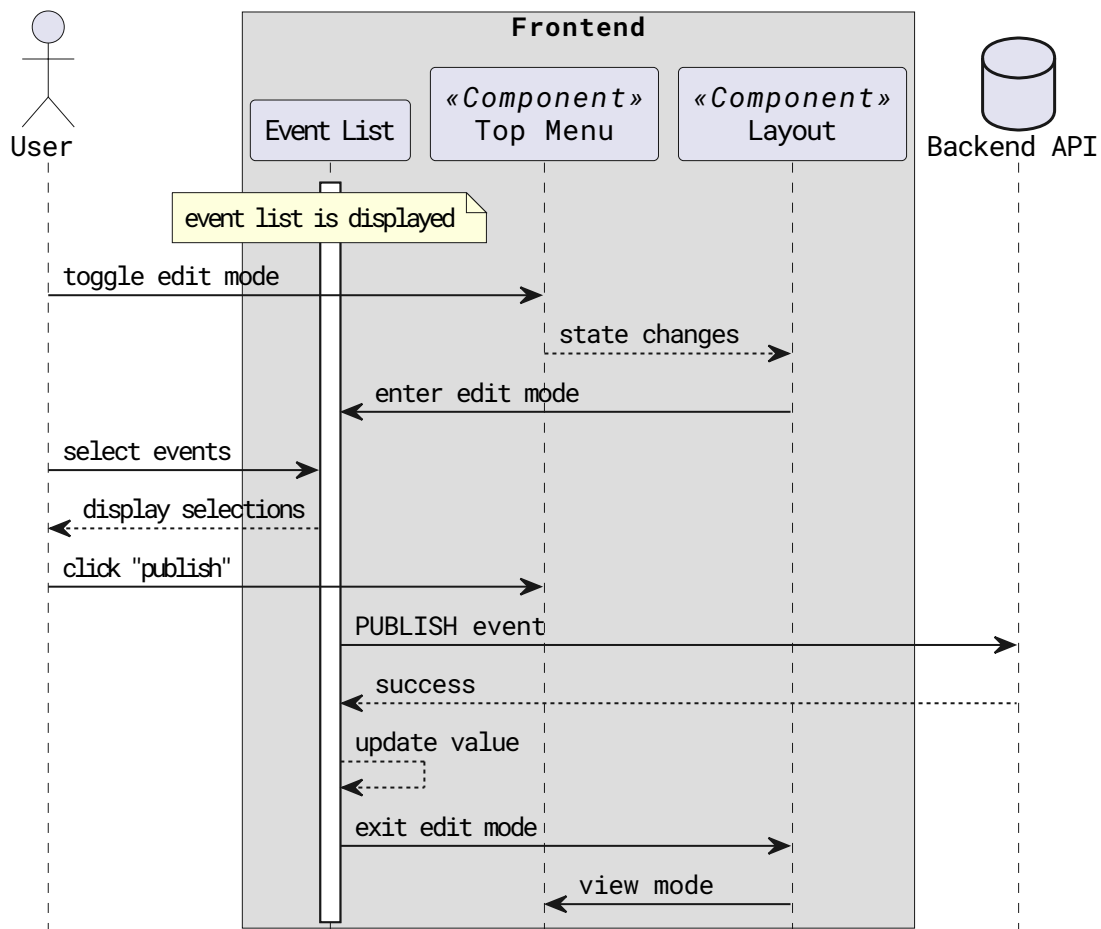

2.2 Edit Event

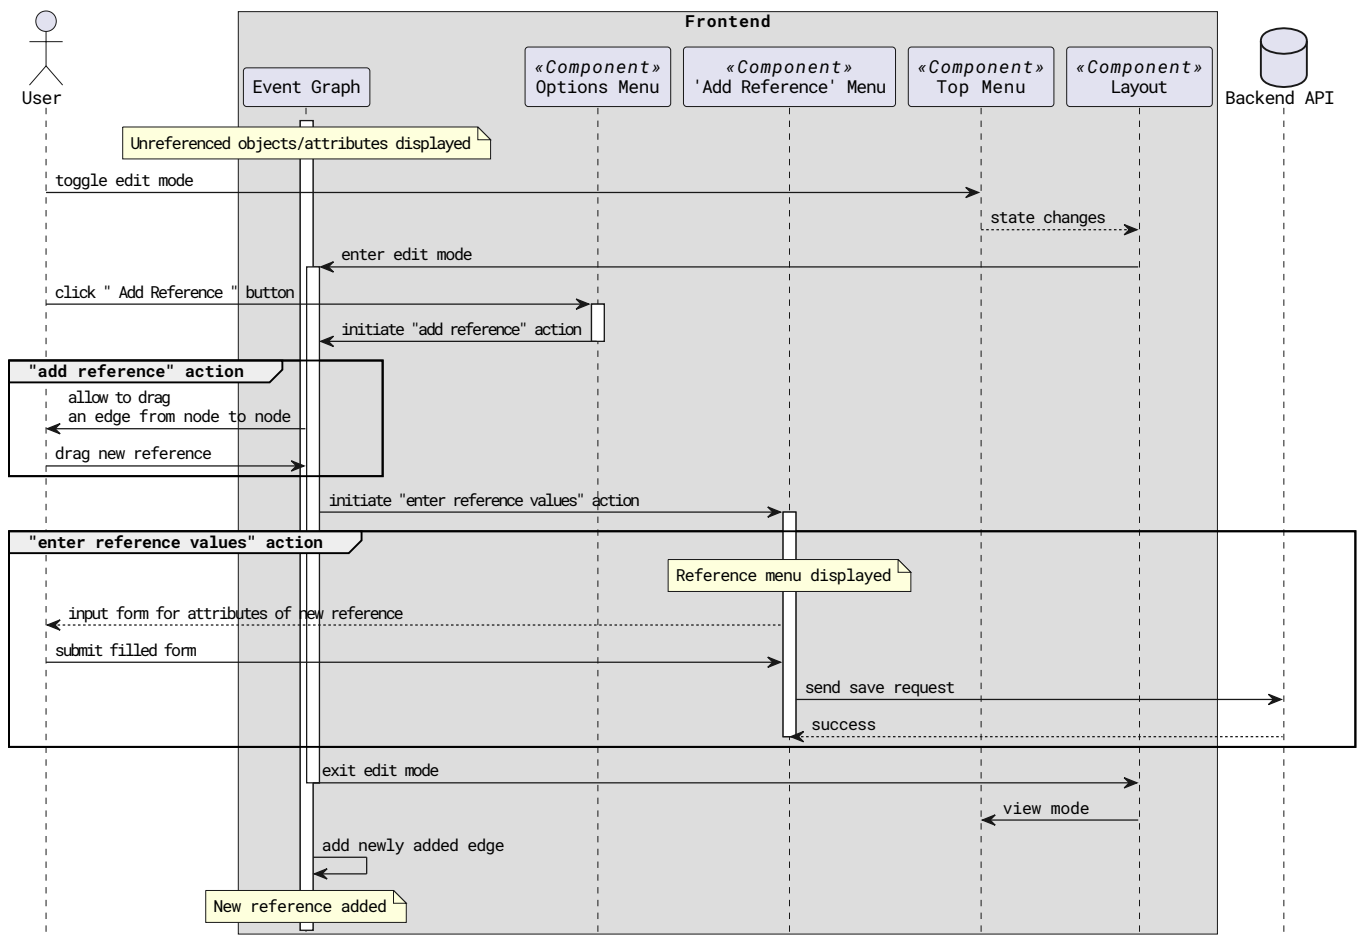

2.3 Filter Events

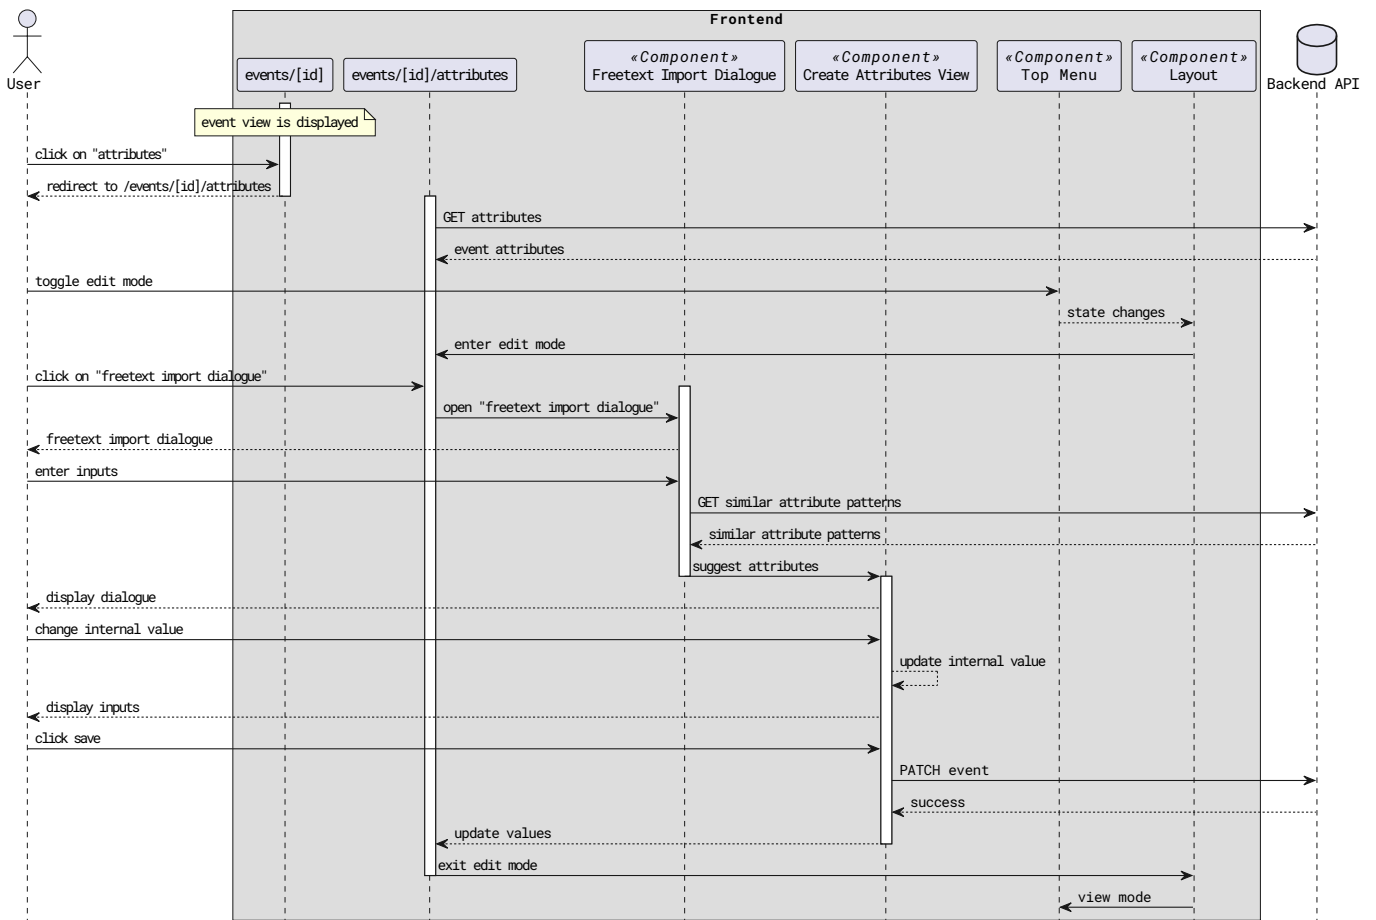

2.4 Publish Event

2.5 Add Reference

2.6 Freetext Import

3. Components

3.1 Info

«Component» Info
Properties
○ text?: string
○ class?: string
Slots
○ default

Displays a text with a default background color of `surface1`. Also sets the default padding and border radius. You can override this by passing your own classes.

3.1.1 Props

text: string | undefined

The text to be displayed.

class: string | undefined

Additional classes to be applied.

3.1.2 Slots

default

3.2 Pill

«Component» Pill
Properties
○ label?: string
○ text?: string
○ icon?: string
○ class?: string
○ style?: string
Slots
○ default

A pill component. A pill is a small rounded rectangle with a label and/or text and/or icon.

Slot:

The content of the pill. If no slot is provided, the text prop will be used.

3.2.1 Props

label: `string` | `undefined`

The label of the pill. Will be placed on the left side of the pill. The background of the label is `bg-crust`.

text: `string` | `undefined`

The text of the pill. Will be placed in the middle of the pill.

icon: `string` | `undefined`

The icon of the pill. Will be placed on the left side of the pill. If a label is present, the icon will be placed on the left side of the label.

class: `string` | `undefined`

Class that should be applied to the pill.

style: `string` | `undefined`

Some style overrides. When possible, the `class` prop should be used instead.

3.2.2 Slots

default

3.3 DatePill

Uses `Pill`.

Displays a date in a pill with the default format. The date format can be configured in the `config.ts` file.

3.3.1 Props

date: `Date` | `null`

The date of the to be displayed.

onNullText: `string` | `undefined`

The text that should be displayed if the date is null.

class: `string` | `undefined`

Class that should be applied to the pill.

3.4 RelativeDatePill

«Component»
RelativeDatePill
Properties
<ul style="list-style-type: none"> date: <i>Date</i> <i>null</i> onNullText?: <i>string</i>

Uses [DatePill](#).

Displays a relative date in a pill. The color of the pill is based on the date.

- If the date is in the past, the pill will be red.
- If the date is over one week in the future, the pill will be green.
- If the date is less then one week in the future, the pill will be orange.

3.4.1 Props

date: *Date* | *null*

The date of the to be displayed.

onNullText: *string* | *undefined*

The text that should be displayed if the date is null.

3.5 HrefPill

«Component»
HrefPill
Properties
<ul style="list-style-type: none"> label?: <i>string</i> text?: <i>string</i> icon?: <i>string</i> href: <i>string</i>

Uses [Pill](#).

A pill component that acts as a link. This pills text will be blue:

3.5.1 Props

label: *string* | *undefined*

The label of the pill. Will be placed on the left side of the pill. The background of the label is `bg-crust`.

text: *string* | *undefined*

The text of the pill. Will be placed in the middle of the pill.

icon: string | undefined

The icon of the pill. Will be placed on the left side of the pill. If a label is present, the icon will be placed on the left side of the label.

href: `string`

The target URL of the pill, which will be navigated to when the pill is clicked.

3.6 PillCollection

The diagram shows a class hierarchy and properties for `PillCollection`. At the top, a box labeled `«Component»` contains a purple circle with a white 'C' and the text `PillCollection`. To the right, a dashed box contains the text `T extends PillProps`. Below this, a horizontal line separates the header from the properties section, which is titled `Properties`. Under `Properties`, three items are listed: `o pills: T[]`, `o base?: ComponentType< SvelteComponent< T, any, any> >`, and `o class?: string`.

Uses `Pill`.

Displays a collection of pills. The pill component that should be used for each pill can be specified by setting the `base` prop.

3.6.1 Props

Generics: `T extends PillProps`

pills: `T[]`

The Pills that should be displayed.

```
base: ComponentType<SvelteComponent<T, any, any>> | undefined
```

The pill component to be used for each pill.

```
class: string | undefined
```

The class of the pill wrapper.

3.7 Boolean

C	«Component» Boolean
Properties	
o isTrue?:	string boolean
o class?:	string

Uses `Pill`.

Displays a boolean value as a text using the [Info](#) component. The background is green if the value is true and red if the value is false.

3.7.1 Props

isTrue: string | boolean | undefined

Displays a boolean value as a text using the [Info](#) component. Also parses strings to booleans. String must be either 'true' or 'false'.

class: string | undefined

Additional classes to be applied to the [Info](#) component.

3.8 LookupPill

<div><div><div>C</div><div>«Component» LookupPill</div></div></div>
Properties
<div><div>o value?: number</div><div>o options: { label?: string undefined; text?: string undefined; icon?: string undefined; class?: string undefined; style?: string undefined; }[]</div><div>o class?: string</div></div>

Uses [Pill](#).

Converts the value given by the `value` prop to an entry from the `options` lookup array and displays the result as a pill.

3.8.1 Props

value: number | undefined

The index corresponding to the entry in the `options` array.

options: { label?: string | undefined; text?: string | undefined; icon?: string | undefined; class?: string | undefined; style?: string | undefined; }[]

Array with props of [Pills](#), indexed by `value`.

class: string | undefined

The class of the pill.

3.9 Table

<div><div><div>C</div><div>«Component» Table</div></div></div>
Slots
<div><div>o default</div></div>

Creates an HTML `table` element with specific styling.

Slot:

The full table.

3.9.1 Slots

default

3.10 Td

Creates an HTML `td` element for the table with specific styling.

Slot:

- The content of the `td`.

3.10.1 Props

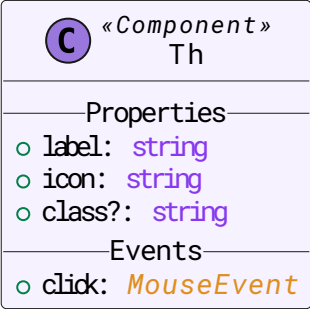

`href: string | undefined`

The url to navigate to when clicking on the `td`.

3.10.2 Slots

default

3.11 Th

Creates an HTML `th` element for the table with specific styling.

Slot:

- The content of the `th`.

3.11.1 Props

`label: string`

The label of the column.

icon: `string`

The icon of the column.

class: `string | undefined`

The class to be applied to the table head.

3.11.2 Events

click: `MouseEvent`

3.12 DynTable

Uses `Table`, `Td`, `Th`.Creates a dynamic `Table` using the `header` and `data` props.The `header` props specifies the columns of the table, while the `data` prop provides rows of data that conform to the structure of the header.

Type safety of this is enforced at compile time using Typescript.

3.12.1 Props

Generics: `T extends IRecord[]`**header:** `(TableHead<T[number]> & DynTableHeadExtent)[]`The header of the table. Also includes the icon and the href. When setting this, it's recommended to use the `createTableHeadGenerator` util function inside of `tableBuilder.util`.**data:** `T`

The data that will be displayed in the table.

href: `((row: T[number]) => string | undefined) | undefined`

The callback that will be called when the user clicks on the row.

3.13 Breadcrumbs

«Component» Breadcrumbs
Properties
○ routes?: <i>Route[]</i>

Displays a `breadcrumb trail` with the given routes.

3.13.1 Props

routes: `Route[]` | `undefined`

The route that will be displayed in the breadcrumbs.

3.14 Checkbox

«Component» Checkbox
Properties
○ checked: <i>boolean</i>
○ name?: <i>string</i>
Events
○ change: <i>Event</i>

A checkbox component. In order to receive changes, the `checked` prop can be reactively bound or the `on:change` event can be listened to for changes.

Internal:

Uses some tailwind css trickery to make the checkbox value to look like a switch. Basically hides the input and sets the focus state via the label. The div is the actual switch and is moved via the peer-checked class where the peer class is set in the input.

3.14.1 Props

checked: `boolean`

Whether the checkbox is checked or not.

name: `string` | `undefined`

The form name of this checkbox.

3.14.2 Events

change: Event

3.15 Select

A select component that uses the native select element. The options are passed as a prop and the value is bound to the `value` prop. The options prop should be an `as const` array of objects with a value and a label property to allow full type safety.

3.15.1 Props

Generics: `T extends string`

options: `readonly { value: T; label: string; } []`

The options of the select. The value is the value of the option and the label is the label of the option.

value: `T`

The value that is currently selected. Because of the template variable, full type safety should be enforced if using `consts` as options.

name: `string | undefined`

Name of this `select` element. Used for forms.

3.16 Input

<div> <div>C</div> <div>«Component» Input</div> </div>
<div>Properties</div> <ul style="list-style-type: none"> placeholder?: string name?: string value?: string icon?: string type?: HTMLInputTypeAttribute class?: string
<div>Slots</div> <ul style="list-style-type: none"> icon suffix
<div>Events</div> <ul style="list-style-type: none"> blur: FocusEvent focus: FocusEvent value: CustomEvent< string>

The default input component. A prefix icon can be added inside of the `icon` slot, and/or a suffix icon in the `suffix` slot.

In order to use this component in forms, the `name` prop should be set.

You can also set the `value` prop, if you want to set an initial value. Or bind to it if you want to use this outside of a form.

3.16.1 Props

placeholder: string | undefined

Placeholder of the input.

name: string | undefined

The name of the input. Used for the label and for form submission.

value: string | undefined

The current value of the input.

icon: string | undefined

The icon to be displayed inside of the input.

type: HTMLInputTypeAttribute | undefined

The type of the input.

class: string | undefined

Additional classes to be applied.

3.16.2 Slots

icon

suffix

3.16.3 Events

blur: FocusEvent

focus: FocusEvent

value: CustomEvent<string>

3.17 Button

<div><div>C</div><div>«Component» Button</div></div>
Properties
<div><div>○</div>class?: string</div>
Slots
<div><div>○</div>default</div>
Events
<div><div>○</div>click: MouseEvent</div>

A button with a slot for content.

3.17.1 Props

class: string | undefined

Additional classes to be applied to this component.

3.17.2 Slots

default

3.17.3 Events

click: `MouseEvent`

3.18 Card

«Component» Card
Properties
○ class?: <code>string</code>
Slots
○ default

A card with a slot for content. Sets the default padding and border radius. You can override this by passing your own classes.

3.18.1 Props

class: `string` | `undefined`

Additional classes to be applied to this component.

3.18.2 Slots

default

3.19 CardRow

«Component» CardRow
Properties
○ class?: <code>string</code>
Slots
○ default

This component should be used to display rows inside of a `Card`.

It's recommended to only use up to two children in the slot, which will be displayed at both ends of the row.

3.19.1 Props

class: `string` | `undefined`

Additional classes to be applied to this component.

3.19.2 Slots

default

3.20 DynCard

Uses [Card](#), [CardRow](#).

A card that displays the data of the given header.

This works dynamically similar to the [DynTable](#) component. So you should probably use the [createTableHeadGenerator](#) util function inside of [tableBuilder.util](#) to create the header.

3.20.1 Props

Generics: **T**

header: `TableHead<T>[]`

The header of the table. Also includes the icon and the href.

data: `T`

The data that will be displayed in the table.

3.21 SideMenuDivider

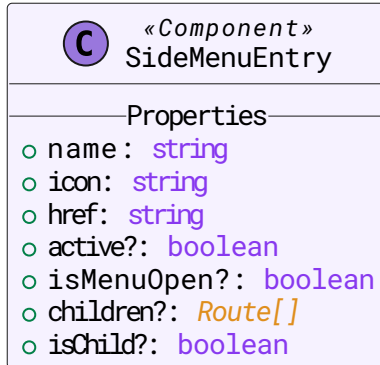

A divider for the side menu.

3.21.1 Props

class: `string` | `undefined`

3.22 SideMenuEntry

Uses `SideMenuDivider`.

The side menu entry component.

It can be opened by clicking on it when the parent side menu is open.

When open, all the children will be displayed as subentries using this component.

3.22.1 Props

name: `string`

The name to be displayed in this side menu entry.

icon: `string`

The icon to be displayed in this side menu entry.

href: `string`

The href to be used in this side menu entry.

This is the URL of the page this entry links to.

active: `boolean` | `undefined`

Whether this side menu entry is active or not.

Active entries are highlighted visually.

isMenuOpen: `boolean` | `undefined`

Whether the parent side menu is open or not.

children: `Route[]` | `undefined`

The children of this side menu entry.

Will be displayed as subentries.

isChild: `boolean | undefined`

Whether this side menu entry is a child of another `SideMenuEntry`, meaning it is a subentry.

3.23 SideMenu

<div> <div>C</div> <div>«Component»</div> </div> <div>SideMenu</div>
<div>Properties</div> <ul style="list-style-type: none"> ○ <code>isOpen?: boolean</code> ○ <code>routes?: SideMenuRoute[]</code> ○ <code>activeRoute?: string null</code>
<div>Slots</div> <ul style="list-style-type: none"> ○ <code>logo</code> ○ <code>default</code>

Uses `SideMenuDivider`, `SideMenuEntry`.

The side menu component. It contains the `SideMenuEntry` and `SideMenuDivider` components.

You can override the default `SideMenuEntry` list display by using the default slot.

You can also override the logo by using the `logo` slot.

Internal:

When setting a logo, do not forget to set the global `FADE_OPTIONS` constant, otherwise it may look weird.

3.23.1 Props

isOpen: `boolean | undefined`

The current state of the side menu.

Can be bound in order to change the state from other components.

routes: `SideMenuRoute[] | undefined`

The routes to be displayed in the side menu.

activeRoute: `string | null | undefined`

The current route that is active.

Should usually be the current URL provided by SvelteKit (`$page.url.href`).

3.23.2 Slots

logo

default

3.24 ActionBarEntry

Represents one of the entries of the [ActionBar](#).

3.24.1 Props

label: `string`

The label of this [ActionBar](#) entry.

icon: `string`

The icon of this [ActionBar](#) entry.

3.25 CallbackEntry

Uses [ActionBarEntry](#).

An [ActionBarEntry](#) with an `on:click` callback action associated with it.

3.25.1 Props

label: `string`

The label of this [ActionBar](#) entry.

icon: `string`

The icon of this [ActionBar](#) entry.

action: `() => void`

Callback function that is executed on click.

3.26 HrefEntry

Uses `ActionBarEntry`.

An `ActionBarEntry` that acts as a link to the specified URL.

3.26.1 Props

label: `string`

The label of this ActionBar entry.

icon: `string`

The icon of this ActionBar entry.

action: `string | undefined`

URL for hyperlink

3.27 ActionBar

Uses `CallbackEntry`, `HrefEntry`.

The action bar contains actions that can be performed when in edit mode.

3.27.1 Props

entries: `ActionBarEntry[]`

Actions that are displayed.

3.28 ToggleModeEntry

Uses [Checkbox](#).

The [ActionBar](#) entry responsible for toggling modes.

3.28.1 Props

mode: Mode | undefined

The current mode of this Entry.

3.29 TopMenu

Uses [Input](#), [ActionBar](#), [ToggleModeEntry](#).

The top menu component.

The search bar and the [ActionBar](#) are located here.

3.29.1 Props

mode: Mode | undefined

The mode of the current page. Possible modes are currently "view" and "edit": TODO: maybe extract this to a store?

isOpen: boolean | undefined

Whether the side menu is open or not. TODO: probably should search for a better solution for this.

3.30 Layout

<div> <div>C</div> <div>«Component» Layout</div> </div>
<div>Properties</div> <ul style="list-style-type: none"> o routes: <i>SideMenuRoute[]</i> o currentRoute?: <i>Route[]</i>
<div>Slots</div> <ul style="list-style-type: none"> o sideMenu o default

Uses [SideMenu](#), [TopMenu](#), [Breadcrumbs](#).

The basic component for the layout of the application.

This Component is intended to be used in [Layouts](#), where the page body will automatically be inserted into the default slot.

You can also override the [SideMenu](#) by using the `sideMenu` slot.

3.30.1 Props

routes: `SideMenuRoute[]`

The routes to be displayed in the side menu.

currentRoute: `Route[]` | `undefined`

The current route to be displayed in the [Breadcrumbs](#).

3.30.2 Slots

sideMenu

default

3.31 Pagination

<div> <div>C</div> <div>«Component» Pagination</div> </div>
<div>Properties</div> <ul style="list-style-type: none"> o page: <i>number</i> o length?: <i>number</i>

A pagination component that allows the user to navigate through pages of a list.

3.31.1 Props

page: `number`

The current page.

length: number | undefined

The total number of pages.

3.32 EditKey

3.33 ViewKey

3.34 EditMode

3.34.1 Slots

default

3.35 SettingsEntry

3.35.1 Props

label: string

3.35.2 Slots

default

4. Pages

4.1 /admin/keys

P	«Page» /admin/keys
Properties	
o data:	PageData

Uses `DynTable`.

4.1.1 Props

data:

```
{ [x: string]: any; [x: number]: any; [x: symbol]: any; header: ((TableHead<{ AuthKey?: { id?: string | undefined; uuid?: string | undefined; authkey_start?: string | undefined; authkey_end?: string | undefined; ... 6 more ...; last_used?: string | ... 1 more ... | undefined; } | undefined; User?: { ...; } | undefin...
```

4.2 /admin/keys/[id]

P	«Page» /admin/keys/[id]

Uses `EditKey`, `ViewKey`.

4.3 /admin/servers

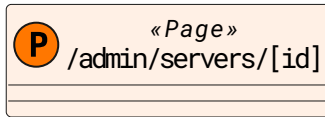

P	«Page» /admin/servers
Properties	
o data:	PageData

Uses `DynTable`.

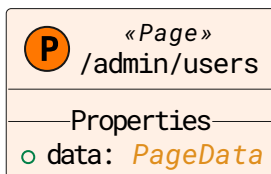

4.3.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; data: { Server?: ({ id?: string | undefined; } & { name?: string | undefined; url?: string | undefined; authkey?: string | undefined; org_id?: string | undefined; ... 20 more ...; cache_timestamp?: boolean | undefined; }) | undefined; Organisation?: ({ ...; } &...
```

4.4 /admin/servers/[id]

4.5 /admin/users

Uses `DynTable`.

4.5.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; data: { User?: ({ id?: string | undefined; } & { org_id?: string | undefined; server_id?: string | undefined; email?: string | undefined; ... 17 more ...; date_modified?: string | undefined; }) | undefined; Role?: { ...; } | undefined; Organisation?: { ...; } | ...
```

4.6 /admin/users/[id]

4.7 /attributes

4.8 /attributes/[id]

P	«Page» /attributes/[id]

4.9 /events

P	«Page» /events
Properties	
○ data:	PageData

Uses [Pagination](#), [DynTable](#).

4.9.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; header: ((TableHead<{ id?: string | undefined; } & { org_id?: string | undefined; distribution?: "0" | "1" | "2" | "3" | "4" | "5" | undefined; ... 16 more ...; event_creator_email?: string | undefined; } & { ...; }, undefined> & DynTableHeadExtent) | (TableHea...
```

Page data

4.10 /events/[id]

P	«Page» /events/[id]
Properties	
○ data:	PageData

Uses [Card](#), [DynCard](#), [PillCollection](#), [EditMode](#).

4.10.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; event: ({ id?: string | undefined; } & { org_id?: string | undefined; distribution?: "0" | "1" | "2" | "3" | "4" | "5" | undefined; info?: string | undefined; ... 15 more ...; event_creator_email?: string | undefined; } & { ...; }) | undefined; }
```

Page data containing the data of the event with the id in the url

4.11 /events/new

P	«Page» /events/new

4.12 /galaxies

P «Page» /galaxies
Properties
o data: <i>PageData</i>

Uses [DynTable](#).

A list of all galaxies.

4.12.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; galaxies: { Galaxy?: { id?: string | undefined; uuid?: string | undefined; name?: string | undefined; type?: string | undefined; description?: string | undefined; version?: string | undefined; icon?: string | undefined; namespace?: string | undefined; kill_chai...
```

The data that will be displayed on this page

4.13 /galaxies/[id]

P «Page» /galaxies/[id]
Properties
o data: <i>PageData</i>

Uses [DynCard](#), [DynTable](#).

4.13.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; galaxy: { Galaxy?: { id?: string | undefined; uuid?: string | undefined; name?: string | undefined; type?: string | undefined; description?: string | undefined; version?: string | undefined; icon?: string | undefined; namespace?: string | undefined; kill_chain...
```

4.14 /galaxies/clusters/[id]

P «Page» /galaxies/clusters/[id]
Properties
o data: <i>PageData</i>

Uses [Boolean](#), [Card](#), [CardRow](#), [Info](#), [HrefPill](#), [LookupPill](#), [PillCollection](#), [DynTable](#).

Show all information about a single galaxy cluster, including its elements.

4.14.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; galaxyCluster: { GalaxyCluster?: ({ id?: string | undefined; } & { uuid?: string | undefined; collection_uuid?: string | undefined; type?: string | undefined; ... 17 more ...; GalaxyElement?: { ...; }[] | undefined; } & { ...; }) | undefined; }; tableData: { .....
```

Data that is provided +page.ts on page load.

4.15 /settings

Uses [Checkbox](#), [Select](#), [SettingsEntry](#).

4.16 /tags

Uses [Pagination](#), [DynTable](#).

4.16.1 Props

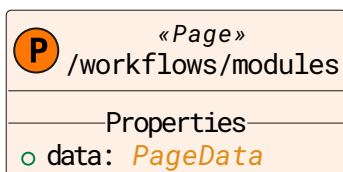

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; data: { Tag?: ({ id?: string | undefined; } & { name?: string | undefined; colour?: string | undefined; exportable?: boolean | undefined; ... 6 more ...; inherited?: number | undefined; })[] | undefined; }; tableData: ({ id?: string | undefined; } & { name?: st...
```

Page data

4.17 /tags/[id]

4.18 /workflows/modules

Uses `DynTable`.

4.18.1 Props

```
data: { [x: string]: any; [x: number]: any; [x: symbol]: any; data: Record<string, never> | { AuthKey?: { id?: string | undefined;
uuid?: string | undefined; authkey_start?: string | undefined; ... 7 more ...; last_used?: string | ... 1 more ... | undefined; } |
undefined; User?: { ...; } | undefined; }[] | ... 41 more .....
```

4.19 /workflows/modules/[id]

«Page»
P /workflows/modules/[id]
